

htmlpagefooter

(mPDF >= 2.0)

htmlpagefooter – Define an HTML page footer with a given name

Description

```
<htmlpagefooter name > html </htmlpagefooter>
```

Define an HTML page footer with a given name. Named footer can be referenced and set later in the document e.g. <sethtmlpagefooter>

Note: Do not name any header or footer starting with html_ This prefix is reserved to identify an **HTML** header/footer when passing its name in a reference.

Note: Remember that, unlike most mPDF custom tags which are self-closing with />, htmlpageheader and htmlpagefooter require end tags. If you wish to make the HTML code compatible with browsers, see Custom tags

Attributes

name

This attribute is a text string to use as the name for this footer.
If name is **BLANK** or omitted, it is set as '_default'.

Content

html

Any valid HTML code can be enclosed between the tags, and will be parsed by mPDF as for any other content.

Changelog

Version	Description
2.0	The tag was added.
