Keep with table

Default false

If true: function AdjustHTML() adds an attribute KEEP-WITH-TABLE to any <table> which is immediately preceded by a <h1-6> element.

This attempts to keep the heading and table together on one page.

Can be used together with <table style="page-break-inside: avoid;">

Automatically sets the table to fit on one page (i.e. page-break-inside=avoid) if it is a rotated table.

Ignored if: Heading is longer than one line of text on the page, Columns are on, Keep-block-together active (i.e. page-break-inside=avoid for surrounding BLOCK).
