

Upgrading 4.1.1 to 4.2 - Archived

If you have made changes to any of your configuration files etc. please keep a safe copy first. These may include:

- `config.php`
- `config_cp.php`
- `config_fonts.php`
- `mpdf.css`

Download the Upgrade .zip file and unzip it

- Upload all of the included files to the server, maintaining the folders as they are
- Set read & write permissions for the new `/tmp/` folder

Changes in layout

Some of the changes in v4.2 may affect the layout of documents you have already developed. Some or all of the following will restore the previous layout to your documents.

Where CSS changes are suggested, you can either edit the `$defaultCSS` variable in the `config.php` file or you can edit the `mpdf.css` file for global changes; alternatively just make the changes for individual documents.

Where configuration variables changes are suggested, you can either edit the `config.php` file, or add to each script as required.

Line-height - space between lines has increased

Set `$this->normalLineheight = 1.2;` in `config.php`

or `$this->defaultCSS['BODY']['LINE-HEIGHT'] => 1.2` in `config.php`

Vertical Space between block elements has reduced

Set `$this->collapseBlockMargins = false;` in `config.php`

Space before first block element at top of page has disappeared

Set `$this->defaultCSS['BODY']['MARGIN-COLLAPSE'] => 'none'` in `config.php`

Images have no margin around them and/or are aligned differently to the text

Add to `mpdf.css`

```
img { margin: 0.83em 0; vertical-align: bottom; }
```

Tables have no/less space above or below

Add to `mpdf.css`

```
table { margin: 0.5em; }
```

Textarea is aligned different vertically

Add to `mpdf.css`

```
textarea { vertical-align: top; }
```
