

Double-sided documents

Odd/Even pages and margins

mPDF can use alternating margins for **ODD** and **EVEN** pages (e.g. for **DOUBLE-SIDED** printing). If `$mirrorMargins` (`$useOddEven` in mPDF < 4.0) is set to **TRUE** or 1 before adding the first page, the document will mirror the left and right margin values on **ODD** and **EVEN** pages i.e. they become inner and outer margins. (this is automatically reversed for **RTL** languages).

NB Headers and footers use the **ODD** pages as default if this is not used.

The first page in a document will be **ODD** i.e. page number 1, and will appear as a **RIGHT** page in a **LTR** document (or **LEFT** page in a **RTL** document)

Examples

Example #1

```
<?php

// Define a document with default left-margin=30 and right-margin=10
$pdf=new mPDF('', '', 0, '', 30, 10);
$pdf->mirrorMargins = true;
$pdf->WriteHTML('<p>Hallo World</p>');
$pdf->AddPage();
// Now the right-margin (inner margin on page 2) = 30
$pdf->WriteHTML('<p>Hallo World</p>');
$pdf->Output();

?>
```
