

# justifyB4br

(mPDF >= 4.4)

justifyB4br – Specify whether to justify line of text beofre a linebreak

## Description

```
void justifyB4br
```

Specify whether to justify line of text beofre a linebreak. This only makes a difference when the text-alignment of the current block is set as "text-align: justify".

In a justified text block, a <br> linebreak will not cause the preceding line to be justified. This behaviour matches most browsers. However, to allow optional compliance with the behaviour of MS Word, which also justifies text before a <br> you can set this variable to **TRUE**.

## Values

*justifyB4br* = **TRUE** | **FALSE**

### Values

**TRUE** : justify line of text beofre a linebreak

**FALSE**: do not justify line of text beofre a linebreak

**DEFAULT**: **FALSE**

## Changelog

Version	Description
4.4	Variable was added.
