

rtlCSS - Archived

Note: Removed in mPDF v5.1

`$mpdf->rtlCSS = 2;`

When using RTL (right-to-left) languages e.g. arabic, mPDF automatically reverses the alignment for paragraphs, table cells etc. Set to a value 0, 1 or 2 determines at what level the CSS styles are overridden. This is determined by whether the HTML code or CSS stylesheet is generated specifically for the language being used.

2 (default) - mPDF will reverse all alignment, whether set in stylesheets or defined in-line (e.g. `<p style="text-align:right">`)

1 - reverses only stylesheets, observing correctly any in-line styles

0 - reverses only the default settings (set in `$default_CSS` as the top of `mpdf.php` file), correctly observing any stylesheet definitions

Default = 2
