

autoVietnamese

(mPDF >= 6.0)

Description

boolean **autoVietnamese**

Tells mPDF whether to try and distinguish the Vietnamese language when using `autoScriptToLang`.

Vietnamese is written using mainly Latin script, and cannot therefore be distinguished for certain from other languages using Latin script. However there are a few characters which are unique to Vietnamese and may enable mPDF to distinguish text in a Vietnamese language.

Because a number of fonts do not contain these unique characters, you may wish mPDF to try and detect Vietnamese so a special font can be selected.

Note: If `autoVietnamese` is **TRUE** mPDF will mark up text detected as Vietnamese even if `baseScript` is set as "1" - ignoring most Latin scripts.

Values

`autoVietnamese` = **TRUE|FALSE**

Values

FALSE: DEFAULT Vietnamese text will be treated as Latin text when using `autoScriptToLang`

TRUE: mPDF will attempt to distinguish Vietnamese, and text will then be marked with `lang= "vi"`

See Also

- `autoScriptToLang` - marks up HTML text using the `lang` attribute, based on the Unicode script block in question
