User's Guide » What Else Can I Do?

Math with MathJax 2

Note: This is an alternative method to the one in Math Formulae with MathJax

Note: This version has an updated script which should work in all browsers.

- 1) Adapt the page in which you are testing/writing the Math formulae
- Ideally set the default output to SVG. Otherwise the user will need to select this from: Math Settings >> Math Renderer >> SVG
- Add code for a button to send the processed SVG to your PHP script

Example of MathJax page

```
<!DOCTYPE html>
< html>
<head>
 <!-- This line adds MathJax to the page with default SVG output -->
 <script type="text/javascript"</pre>
src="http://cdn.mathjax.org/mathjax/latest/MathJax.js?config=TeX-AMS-MML_SVG"></script>
 </head>
<body>
<h3>The Cauchy-Schwarz Inequality (TeX)</h3>
\[ \left( \sum_{k=1}^n a_k b_k \right)^2 \leq \left( \sum_{k=1}^n a_k^2 \right) \
b_k^2 \right) \]
 <h3>Standard Deviation (MathML)</h3>
\label{linear_block} $$ display="block"><mrow><mi>&#x03c3;</mi><mo>=</mo><mfrac><mrow><mn>1</mn></mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mrow><mr
 i>N</mi></mrow></mfrac><mstyle
\label{linear_displaystyle} \end{subarray} $$ displaystyle="true"><mrow><mrow><mrow><mrow><mi>i</mi><mo><mn>1<</mrow><mi>i</mi><mi>i</mi><mo><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi>i</mi><mi
 /mn></mrow><mi>N</mi></mrow></munderover><mrow><msup><mrow><mo
 stretchy="false">(</mo><msub><mrow><mi>x</mi></mrow><mi>i</mi></mrow></msub><mo>&#x2212;</mo><
mi>\μ</mi><mo
 stretchy="false">)</mo></mrow><mrow><mn>2</mn></msup></mrow></mrow></mstyle></mrow></msqrt><m
o>.</mo></mrow></math>
<h3>Inline equation (TeX)</h3>
Finally, while display equations look good for a page of samples, the ability to mix math and
 text in a paragraph is also important. This expression (\sqrt{3x-1}+(1+x)^2) is an example of an
 inline equation. As you see, MathJax equations can be used this way as well, without unduly
disturbing the spacing between lines.
<!-- This block of code adds a button to send the processed HTML code to your script:
example_test.php -->
 <div id="mpdf-create">
 <form autocomplete="off" action="example_test.php" method="POST" id="pdfform"</pre>
onSubmit="document.getElementById('bodydata').value=encodeURIComponent(document.body.innerHTML);">
 <input type="submit" value="PDF" name="submit"/>
 <input type="hidden" value="" id="bodydata" name="bodydata" />
 </form>
</div>
</body>
```

2) Now you need a PHP script (in this example: example_test.php) which processes the output code from MathJax so that it is readable by mPDF:

```
Example of 1st part of example_test.php
```

2015-08-05

```
// You should include a check for unwanted external referrers to prevent
// calls on this script from external websites!
$mpdf=new mPDF('');
$html = $_POST['bodydata'];
$html = urldecode($html);
preg_match('/<svg[^>]*>\s*(<defs.*?>.*?<\/defs>)\s*<\/svg>/',$html,$m);
defs = m[1];
$html = preg replace('/<svg[^>]*>\s*<defs.*?<\/defs>\s*<\/svg>/','',$html);
$html = preg_replace('/(<svg[^>]*>)/',"\\1".$defs,$html);
preg_match_all('/<svg([^>]*)style="(.*?)"/',$html,$m);
for ($i=0;$i<count($m[0]);$i++) {</pre>
   $style=$m[2][$i];
   preg_match('/width: (.*?);/',$style, $wr);
    $w = $mpdf->ConvertSize($wr[1],0,$mpdf->FontSize) * $mpdf->dpi/25.4;
   preg_match('/height: (.*?);/',$style, $hr);
   $h = $mpdf->ConvertSize($hr[1],0,$mpdf->FontSize) * $mpdf->dpi/25.4;
   p = '(syg'.m[1][si].' width="'.sw.'" height="'.sh.'" style="'.sm[2][si].'"';
   $html = str_replace($m[0][$i],$replace,$html);
```

3a) Finally you can create a PDF document directly based on the MathJax web page submitted:

Example of 2nd part of example_test.php creating a PDF document

```
// ADD a stylesheet
$stylesheet = '
/* This helps alignment for inline equations */
img { vertical-align: middle; }
/* This sets padding for display equations (but not in-line ones) */
.MathJax_SVG_Display { padding: lem 0; }
/* This prevents the Create PDF button being reproduced in the PDF document */
/* Use this method to suppress other parts of the web-page from displaying */
#mpdf-create { display: none; }
/* Add any other CSS styling here for the rest of the document */
/* The CSS/stylesheet information from the original page is not accessible here */
';

$mpdf->WriteHTML($stylesheet,1);

$mpdf->WriteHTML($stylesheet,1);

$mpdf->Output();
exit;
```

3b) Or you could output the prepared SVG code suitable for including directly in your PDF documents:

Example of 2nd part of example_test.php to output the code to a browser

```
...
// To output SVG files (one for each formula) readable by mPDF as text output
header('Content-type: text/plain');
preg_match_all('/<svg(.*?)<\/svg>/',$html,$m);
for ($i=0;$i<count($m[0]);$i++) {
    $svg = $m[0][$i];
    $svg = preg_replace('/>/',">\n",$svg); // Just add some new lines
    echo $svg."\n\n";
}
exit;
```

See an example: http://mpdf1.com/common/mpdf/examples/MathJaxSample.htm
