Requirements

mPDF was originally developed and tested on PHP 4.4.4 (Linux), and the output files in Adobe Reader 5, 7, and 8.

Since version 1.1+ mPDF has been developed on PHP5 only, although I am not aware of anything that would be incompatible with PHP4.

PHP requires the mb_string module to be enabled (see http://uk.php.net/manual/en/ref.mbstring.php) which means that PHP>=4.3.0 will be required as a minimum, and PHP 4.3.0 to 4.3.3 need --enable-mbstring=all

The /u modifier in PCRE is required. This modifier is available from PHP 4.1.0 or greater on Unix and from PHP 4.2.3 on win32. UTF-8 validity of the pattern is checked since PHP 4.3.5. and will result in death of the script if invalid utf-8 characters/string is sent to mPDF.

As for FPDF, PHP requires zlib for compression.

UPDATE - V3.1

This website is now running PHP 5.2.8 on Linux.
