strcode2utf()

(htmltoolkit >=1.0)

strcode2utf – Convert HTML numerical entities to UTF-8 encoded string

Description

> string **strcode2utf** (string *$text* [, boolean *$low*])

Returns a UTF-8 encoded string.

> **Note:** This function is not part of the mPDF class, and is located in the htmltoolkit.php file. It is called without the class prefix e.g. $mpd->

> **Note: strcode2utf** is useful for preparing text to be used as a Watermark, or for the metadata properties of Title, Author, Creator and Keywords - which require UTF-8 encoded strings with no entities.

Parameters

text

> The input string, containing HTML numerical entities e.g. Ά or •

low

> Specifies whether to convert HTML numerical entities of ASCII characters (<128).
> **DEFAULT**: **TRUE**

> **Values**
> **TRUE**: Convert all HTML numerical entities to UTF-8 characters
> **FALSE**: Only convert characters above codepoint 127

> **Note:** This function does not convert named character entities like & " or »

Return value

Returns a UTF-8 encoded string.

Examples

> **Example #1**

```php
<?php

$mpdf=new mPDF();

$wm = strcode2utf("&#1575;&#1610;&#1604;&#1575;&#1578; &#1601;&#1610;&#1605;&#1575;
&#1575;&#1610;&#1604;&#1575;&#1578; &#1601;&#1610;&#1605;&#1575;");

$mpdf->SetWatermarkText($wm);
$mpdf->showWatermark = true;
$mpdf->WriteHTML('<p>Hallo World</p>');

?>
```
