DefFooterByName()

(mPDF >= 2.0)

DefFooterByName – Define a page footer with a given name

Description

> void **DefFooterByName** ([string *$name* [, array *$footer*]])

Define a page footer with a given name. Named footers can be referenced and set later in the document e.g. SetFooterByName()

> **Note:** Do not name any header or footer starting with html_ This prefix is reserved to identify an **HTML** header/footer when passing its name in a reference.

> **Note:** This function/method was altered in mPDF 2.2 by capitalising the first letter of the name. As function/method names in PHP have hitherto been case-insensitive, this should not cause any problems, but it is recommended where possible to use the preferred spelling.

Parameters

name

> User-defined name for the footer. If *name* = **BLANK** the name '_default' is used.

footer

> This parameter specifies the content of the page footer as an array.
> **DEFAULT**: array()abov

> **Values** in the array
> *content*: **TEXT STRING**
> *font-size*: **FLOAT** font size in **pts**
> *font-style*: B|I|BI|**BLANK STRING**
> *font-family*: Any available font-family
> *color*: CSS '#RRGGBB' string
> *line*: 0|1 - specify whether to draw a line above the footer

```
$footer = array (
    'L' => array (
      'content' => '',
      'font-size' => 10,
      'font-style' => 'B',
      'font-family' => 'serif',
      'color'=>'#000000'
    ),
    'C' => array (
      'content' => '',
      'font-size' => 10,
      'font-style' => 'B',
      'font-family' => 'serif',
      'color'=>'#000000'
    ),
    'R' => array (
      'content' => 'My document',
      'font-size' => 10,
      'font-style' => 'B',
      'font-family' => 'serif',
```

```
        'color'=>'#000000'
    ),
    'line' => 1,
);
```

Changelog

Version	Description
2.0	The function was added.
